

REFERENCE DIAGRAM

ASSEMBLY STEPS

Step 1: Read the instructions in the box for easy assembly.

Step 2: When assembling the frame, make sure the short leg of the "U" shaped tubing is the same on each side — this will be the **front** of the rebounder. Bolt faces inward with nut on the inside.

Step 3: As you assemble the frame, add the plastic base feet onto the base tubing as shown in the diagram.

Step 4: Once the frame is assembled, briefly disconnect the tubing to slide the bungees onto the tubing as shown in the diagram.

Step 5: Place **7 bungees** on the top tube and **7 bungees** on each of the bottom tubes. Space the remaining bungees equally around the frame.

Step 6: Connect the net to the bungees — top first, then bottom, then sides. The net and bungees are very tight but extremely strong.

Step 7: Attach the ribbon target to the desired position on the net.

Step 8: Have FUN!!

Note: These supplemental instructions are provided to clarify any steps in the original box instructions that may be unclear. Refer to both for best results.
